6.2	Parameter Impact Rankings	12

1 Overview

This one-way sensitivity analysis (OWSA) evaluates the robustness of the cost-effectiveness results for three biomarker-guided strategies (CRP, TLR, and TMB/BRAF) compared to standard of care for selecting metastatic microsatellite stable (MSS)/proficient mismatch repair (pMMR) colorectal cancer patients for immunotherapy treatment.

The analysis examines how variations in individual model parameters affect the net monetary benefit (NMB) and optimal strategy selection, providing insights into which parameters have the greatest impact on decision uncertainty.

This report contains:

- **Technical Details:** Analysis specifications and methodology
- **Parameter Overview:** Description of the key parameters varied in the sensitivity analysis
- **Tornado Diagrams:** Visual representation of parameter impact for each strategy
- **Line Plot Analysis:** Parameter sensitivity across the full range for NMB, costs, and effectiveness
- **Robustness Analysis:** Assessment of strategy switching and decision uncertainty

2 Technical Details

2.1 Analysis Specifications

Model Configuration:

- Total model evaluations: 60
- Strategies evaluated: 4 (control, crp, tlr, tmb_braf)
- Parameters tested: 7
- Time horizon: 520 weeks (10 years)
- Discount rate: 4% per annum
- Willingness-to-pay threshold: €51,000
- Parameter variation range: $\pm 20\%$

Parameter Constraints:

- Utility parameters capped at maximum value of 1.0
- All cost parameters constrained to non-negative values

Methodology:

- One-way sensitivity analysis varies each parameter individually
- All other parameters held at base case values during each test
- Net Monetary Benefit calculated as: $NMB = \text{Effect} \times WTP - \text{Cost}$
- Tornado diagrams ordered by magnitude of parameter impact
- Line plots show outcome response across actual parameter values
- Three outcome measures: Net Monetary Benefit, Total Costs, and Total Effectiveness

2.2 Computational Environment

Analysis completed on: October 07, 2025

R version: R version 4.3.2 (2023-10-31 ucrt)

Repository: ben-geisler/METIMMOX-1

Report version: 1.0

3 Analysis Parameters

Table 1: Parameters Included in One-Way Sensitivity Analysis

Parameter		Description	Base Value	Min Value	Max Value	Range
c_drug_nivo	c_drug_nivo	Cost of Nivolumab treatment per cycle	13923.00	11138.40	16707.60	$\pm 20\%$
c_drug_FLOX	c_drug_FLOX	Cost of FLOX chemotherapy per cycle	427.00	341.60	512.40	$\pm 20\%$
c_test_NGS	c_test_NGS	Cost of next-generation sequencing testing	1439.00	1151.20	1726.80	$\pm 20\%$
c_test_CT	c_test_CT	Cost of computed tomography imaging	386.00	308.80	463.20	$\pm 20\%$
u_np	u_np	Utility value - Non-progressive disease state	0.91	0.73	1.00	$\pm 20\%$
u_p	u_p	Utility value - Progressive disease state	0.90	0.72	1.00	$\pm 20\%$
c_other_last	c_other_last	Other medical costs in final cycle	13803.00	11042.40	16563.60	$\pm 20\%$

4 Tornado Diagrams

4.1 Standard of Care Strategy

Figure 1: Tornado Diagram - Standard of Care One-Way Sensitivity Analysis

4.2 CRP-guided Strategy

Figure 2: Tornado Diagram - CRP-guided Strategy One-Way Sensitivity Analysis

4.3 TLR-guided Strategy

Figure 3: Tornado Diagram - TLR-guided Strategy One-Way Sensitivity Analysis

4.4 TMB/BRAF-guided Strategy

Figure 4: Tornado Diagram - TMB/BRAF-guided Strategy One-Way Sensitivity Analysis

5 Line Plot Sensitivity Analysis

5.1 Net Monetary Benefit

Figure 5: Parameter Sensitivity - Net Monetary Benefit

5.2 Total Costs

Figure 6: Parameter Sensitivity - Total Costs

5.3 Total Effectiveness

Figure 7: Parameter Sensitivity - Total Effectiveness

6 Robustness Analysis

6.1 Strategy Switching Analysis

The optimal strategy (control) remains unchanged across all parameter variations tested. This indicates robust decision-making within the $\pm 20\%$ parameter variation range.

6.2 Parameter Impact Rankings

Table 2: Top 3 Most Influential Parameters by Strategy

Strategy	Rank	Parameter	NMB Impact (€K)
Standard of Care	1	u_p	\$0K
	2	u_np	\$0K
	3	c_other_last	\$0K
CRP-guided	1	u_p	\$0K
	2	u_np	\$0K
	3	c_drug_nivo	\$0K
TLR-guided	1	u_p	\$0K
	2	u_np	\$0K
	3	c_drug_nivo	\$0K
TMB/BRAF-guided	1	u_p	\$0K
	2	u_np	\$0K
	3	c_drug_nivo	\$0K

Note: Impact represents the absolute difference in Net Monetary Benefit between the minimum and maximum parameter values for each strategy.
