3 Interpretation

This report compares baseline and fixed single-model snapshots for each bug-fix issue that has both, plus a cumulative comparison from the earliest baseline to the latest fixed snapshot. Snapshots are produced by the `13_save_snapshot.R` analysis script (in `scripts/R/analysis/`). If older snapshots contain obsolete multi-model components, `load_snapshot()` warns during render and the tables use the top-level single-model results.
