1 Summary

This report compares cost-effectiveness analysis results before and after addressing GitHub issue #99. The comparison assesses whether bug fixes or model changes affected results.

Current Comparison:

- **Issue:** #99 - No title available
- **Baseline:** Commit 376b4c6 (2025-12-21 13:20:42)
- **Fixed:** Commit d1eef51 (2025-12-21 16:23:17)

3.1 Efficiency Frontier Comparison

Figure 1: Cost-effectiveness efficiency frontier comparison using dampack. Baseline (top) and fixed (bottom) strategies are shown with the efficiency frontier connecting non-dominated strategies. Dominated strategies appear off the frontier line.

3.2 Net Monetary Benefit Comparison

Optimal Strategy: Unchanged (control)

Table 6: Net Monetary Benefit Comparison at WTP = €51,000

Table 9: PSA ICER Results (n = 5,000 simulations)

Strategy	Baseline Mean ICER	Fixed Mean ICER
control	—	—
crp	€189,725/QALY	€ 308,814/QALY
tlr	€601,344/QALY	€1,163,428/QALY
tmb_braf	€160,742/QALY	€ 178,995/QALY

Note: ICERs calculated from PSA mean costs and effects as point estimates.

4.1 PSA Visual Analysis

4.1.1 PSA Scatter Plots (Side-by-Side)

Figure 2: Cost-effectiveness plane showing PSA simulations baseline (left) and fixed (right)

4.1.2 PSA Scatter Plots (Overlaid)

Figure 3: Overlaid cost-effectiveness plane comparing baseline and fixed PSA simulations. This plot overlays all PSA simulation results from both snapshots on a single plane, where each point represents one PSA iteration for a given strategy. Hollow circles indicate baseline simulations, while filled circles indicate fixed simulations. Colors distinguish strategies, while shapes distinguish snapshots. The overlay allows direct visual comparison of how the probabilistic distributions changed after the bug fix: if the fix was purely methodological with no impact on central estimates, baseline and fixed points would overlap completely, whereas systematic shifts in the point clouds indicate changes in underlying model behavior.

6 Summary

The comparison for issue #99 shows:

- **Optimal Strategy:** Unchanged (control)
- **Maximum Cost Change:** €0.00 (minor)
- **Maximum Effect Change:** 0.000 QALYs (minor)
- **Maximum ICER Change:** €0/QALY (minor)
- **Parameter Changes:** None detected

Interpretation: Changes are within expected bounds for bug fixes that improve numerical stability or code quality.
