1 Overview

This report documents the parametric survival models used in the economic evaluation. A single joint model is fitted for both endpoints:

Table 1: Economic survival formulas

Endpoint	Formula
Overall survival	$\text{Surv}(\text{OSwk}, \text{Death}) \sim \text{Age} + \text{sex} + \text{Rx} + \text{crp} * \text{Rx} + \text{tmb_braf} * \text{Rx}$
Progression-free survival	$\text{Surv}(\text{PFSwk}, \text{Progression}) \sim \text{Age} + \text{sex} + \text{Rx} + \text{crp} * \text{Rx} + \text{tmb_braf} * \text{Rx}$

4 Strategy Survival Curves

Figure 1: Predicted survival curves for economic biomarker strategies

5 Summary

The economic model uses one joint formula for both CRP-guided and TMB/BRAF-guided strategies. Parametric distribution choice is selected by AIC for each endpoint, with Weibull PH retained as a familiar reference fit.
