

Biosimilar Nivolumab Pricing Scenario

METIMMOX-1 Economic Evaluation

Ben Geisler

2026-07-12

Table of contents

1	Overview	1
2	Pricing Scenarios	1
3	Deterministic Results	1
4	Summary	2

1 Overview

This scenario examines whether a lower nivolumab acquisition cost changes the cost-effectiveness of the single joint economic model. The strategies are standard of care, CRP-guided immunotherapy, and TMB/BRAF-guided immunotherapy.

2 Pricing Scenarios

Table 1: Nivolumab pricing scenarios

Scenario	Nivolumab Cost per Administration	Change
Base case	EUR 13,923	–
Biosimilar	EUR 4,641	-66.7%

3 Deterministic Results

Table 2: Base case and biosimilar deterministic cost-effectiveness results

Scenario	Strategy	Cost	QALYs	Incremental Cost	Incremental QALYs	ICER	Status
Base case	Standard of Care	EUR 21,056	1.350	EUR 0	0.000	–	Reference
Base case	CRP-guided	EUR 53,791	1.389	EUR 32,735	0.039	EUR 843,973	Non-dominated
Base case	TMB/BRAF-guided	EUR 63,235	1.351	EUR 42,179	0.002	EUR 26,508,350	Non-dominated
Biosimilar	Standard of Care	EUR 21,056	1.350	EUR 0	0.000	–	Reference
Biosimilar	CRP-guided	EUR 31,823	1.389	EUR 10,768	0.039	EUR 277,613	Non-dominated
Biosimilar	TMB/BRAF-guided	EUR 36,208	1.351	EUR 15,152	0.002	EUR 9,522,426	Non-dominated

Figure 1: Net monetary benefit by pricing scenario

4 Summary

The biosimilar scenario is evaluated with the same single joint economic survival model as the base case. Only the nivolumab administration cost is changed; strategy definitions, biomarker prevalences, utilities, and survival curves are unchanged.
