

Enriched Population Analysis

METIMMOX-1 Economic Evaluation

Ben Geisler

2026-07-12

Table of contents

1	Overview	1
2	Biomarker Prevalence	1
3	Base Case vs Enriched Population	1
4	Interpretation	2

1 Overview

This report presents a ceiling scenario for the economic biomarkers included in the single joint model. The analysis compares biomarker-positive patients receiving FLOX + nivolumab with biomarker-positive patients receiving FLOX only.

Economic biomarkers are CRP and TMB/BRAF.

2 Biomarker Prevalence

Table 1: Economic biomarker-positive prevalences

Biomarker	Prevalence	N Positive
CRP	33.8%	24
TMB/BRAF	44.9%	31

3 Base Case vs Enriched Population

Table 2: Base case and enriched-population ICERs

Biomarker	Prevalence	Base Case ICER	Enriched ICER	Change
CRP	33.8%	EUR 843,973	EUR 841,411	-0.3%
TMB/BRAF	44.9%	EUR 26,508,350	EUR 82,763,703	+212.2%

Table 3: Detailed enriched-population results

Biomarker	Experimental Cost	Experimental QALYs	Control Cost	Control QALYs	Enriched ICER
CRP	EUR 117,453	1.781	EUR 20,660	1.666	EUR 841,411
TMB/BRAF	EUR 112,149	1.428	EUR 23,881	1.427	EUR 82,763,703

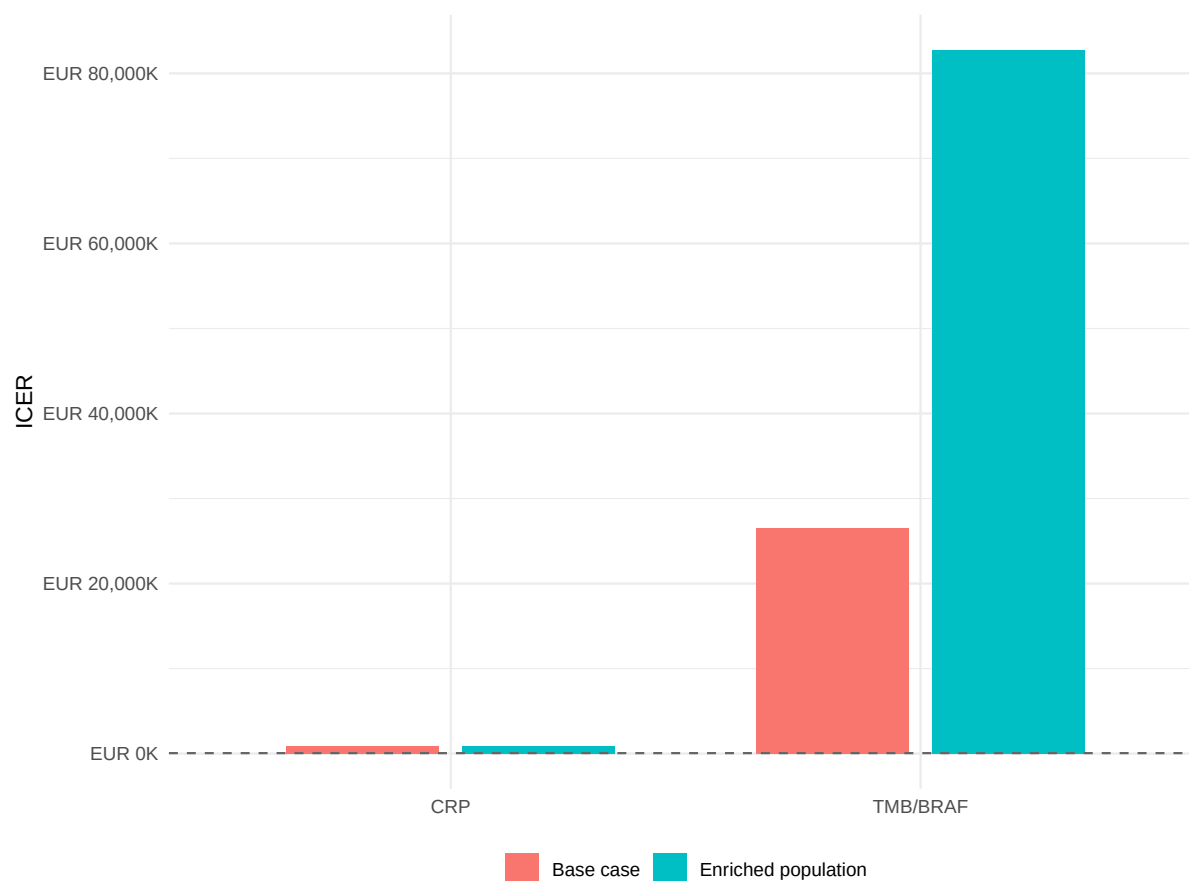

Figure 1: Base case and enriched-population ICERs

4 Interpretation

The enriched analysis isolates expected value among biomarker-positive patients and removes dilution from biomarker-negative patients who would receive standard care under a guided strategy. The enriched control arm is counterfactual and is generated from the fitted single joint survival model.
